

Modernizing Monolithic ASP.NET Apps with Docker

The Workshop

Introduce the scenario
Web front end running on LAMP
Using API back end running on Windows

Agenda

Introduction

1. Admin
2. Docker on Windows
3. Demo app

Workshop

1. Docker & Windows Containers
2. Modernizing the platform
3. Modernizing the architecture

Meet the team

Michael Friis

Brandon Royal

Stefan Scherer

Elton Stoneman

Protocol

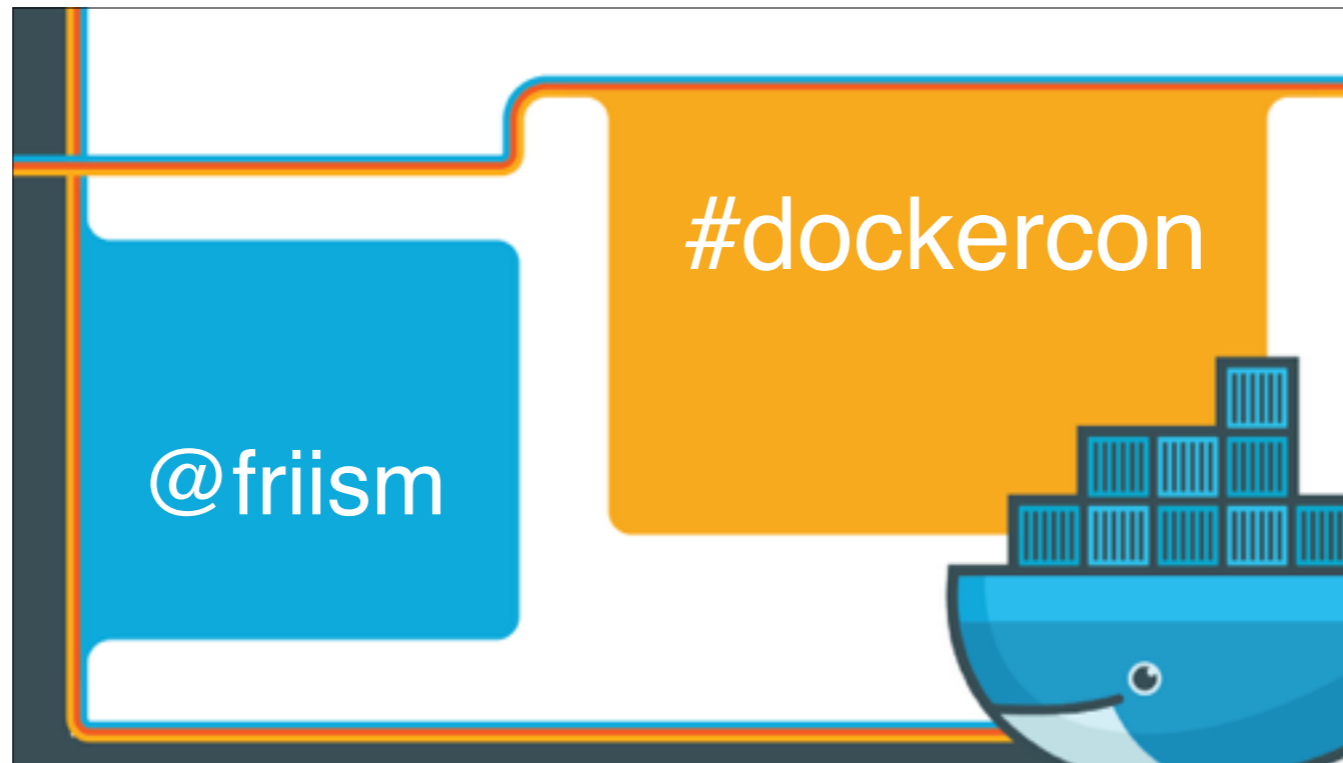

Green: done

Yellow: need advice

Red: HELP!

Before we begin

[dockr.ly/
dc-mta-workshop](https://dockr.ly/dc-mta-workshop)

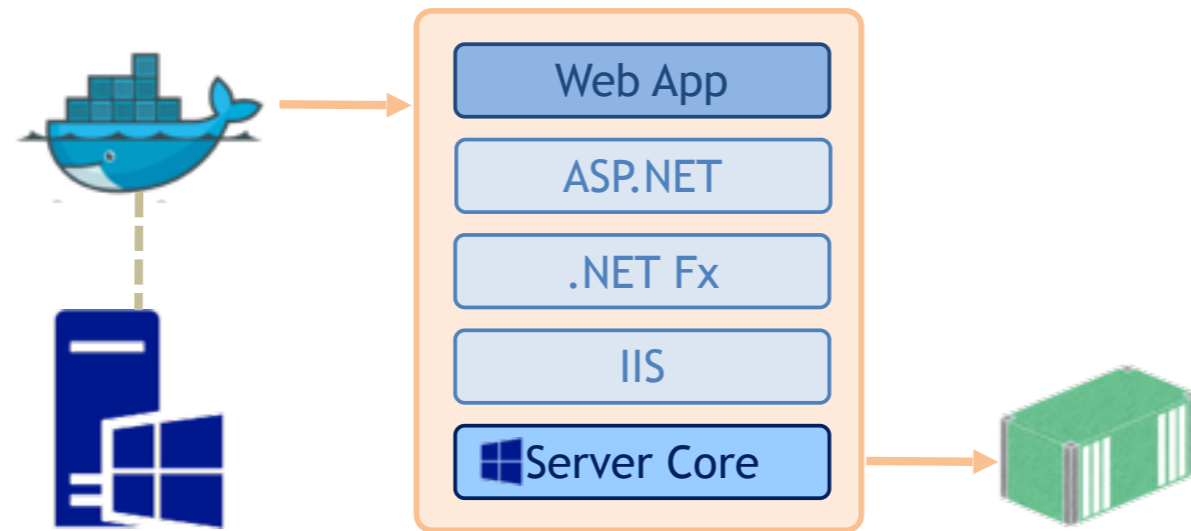

build

ship

run

```
> docker build
```

```
FROM microsoft/aspnet:windowsservercore
```

```
COPY UpgradeSample-1.0.0.0.msi /
```

```
RUN msixec /i c:\UpgradeSample-1.0.0.0.msi  
RELEASENAME=2017.02 /qn
```

```
# escape=`
FROM microsoft/windowsservercore
SHELL ["powershell", "-Command"]

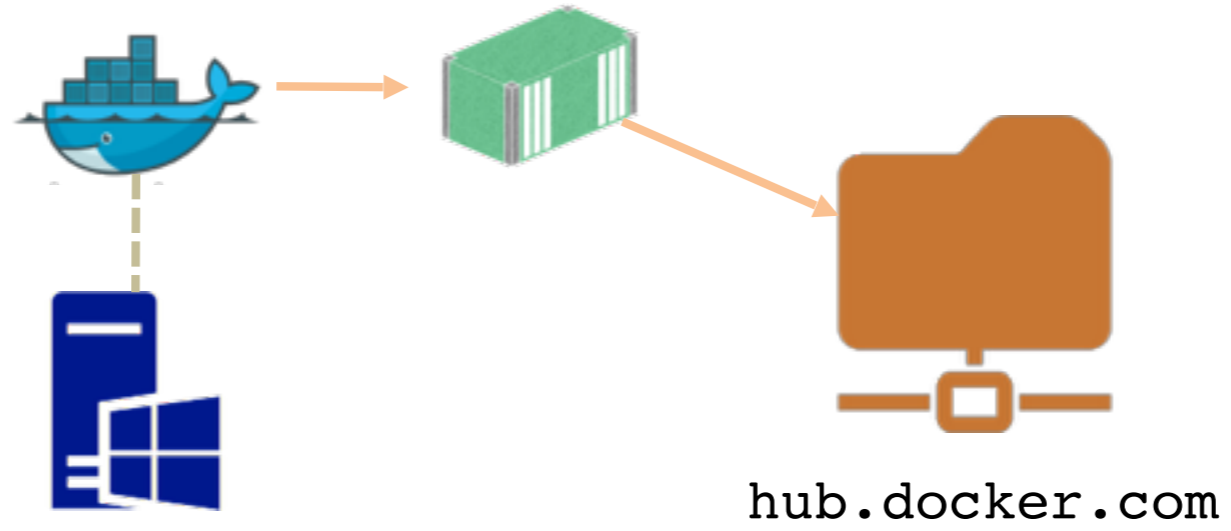

RUN Add-WindowsFeature Web-server, `
    NET-Framework-45-ASPNET, Web-Asp-Net45;
    Remove-Website -Name 'Default Web Site'

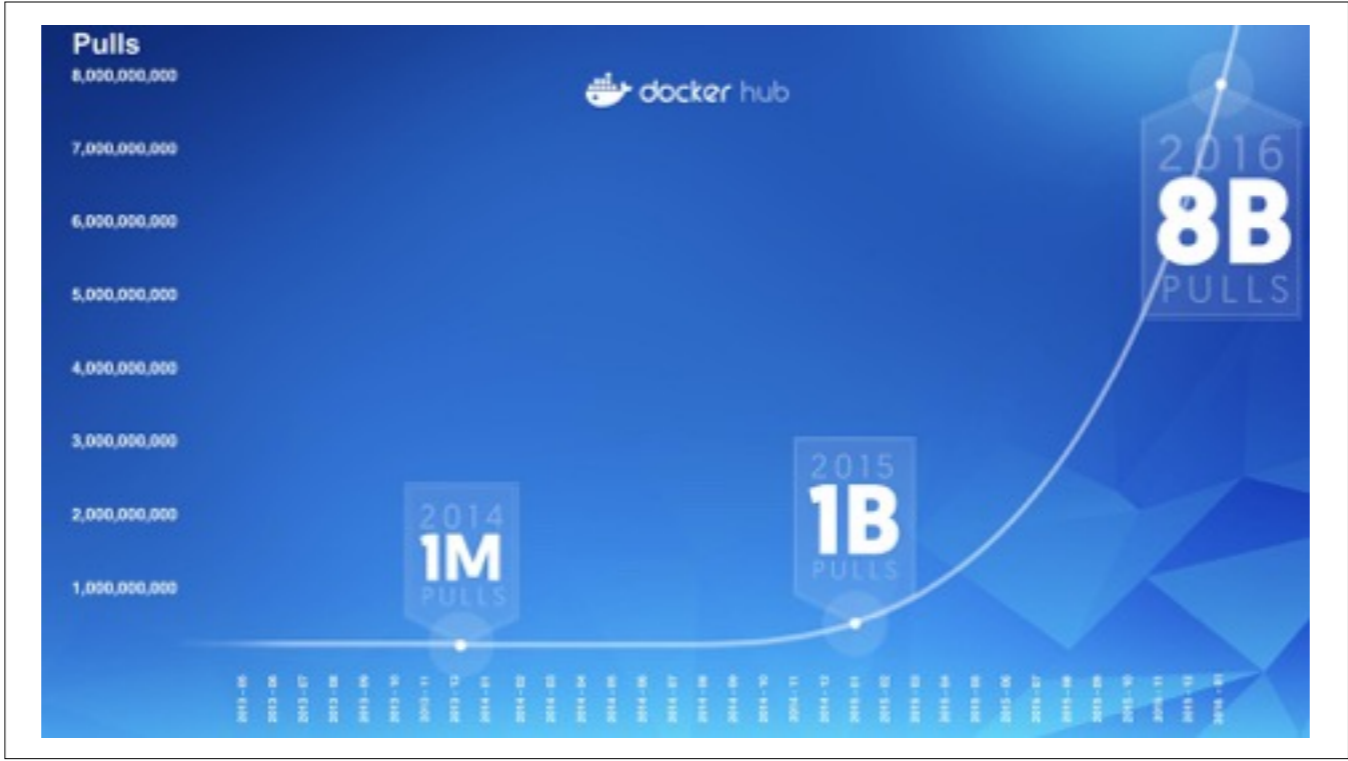

COPY ProductLaunchWeb /product-launch-web
RUN New-Website -Name 'product-launch' `
    -PhysicalPath 'C:\product-launch-web' -Port 80

EXPOSE 80

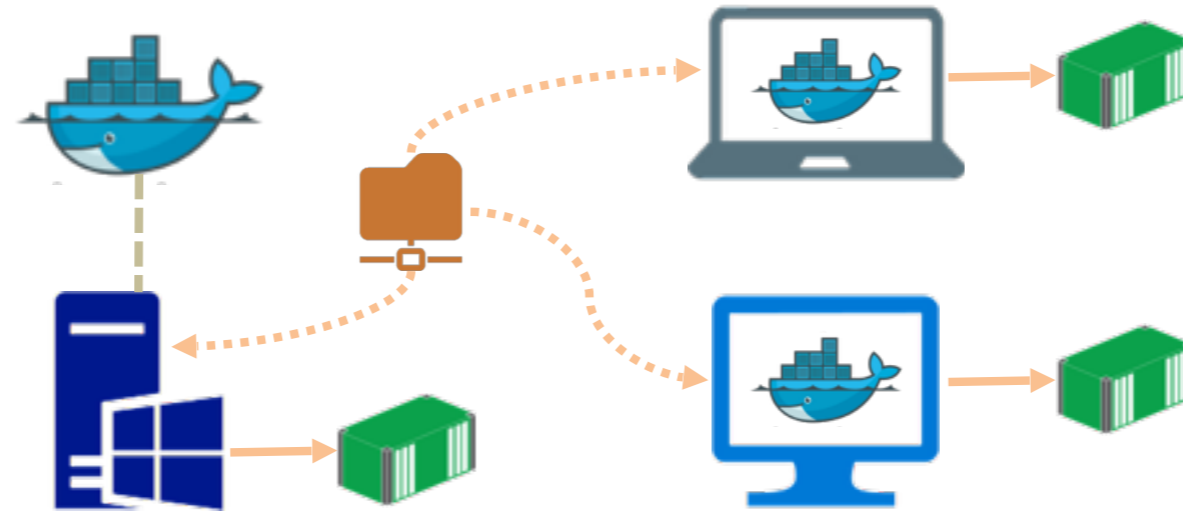

COPY bootstrap.ps1 /
ENTRYPOINT ./bootstrap.ps1
```

```
> docker push
```

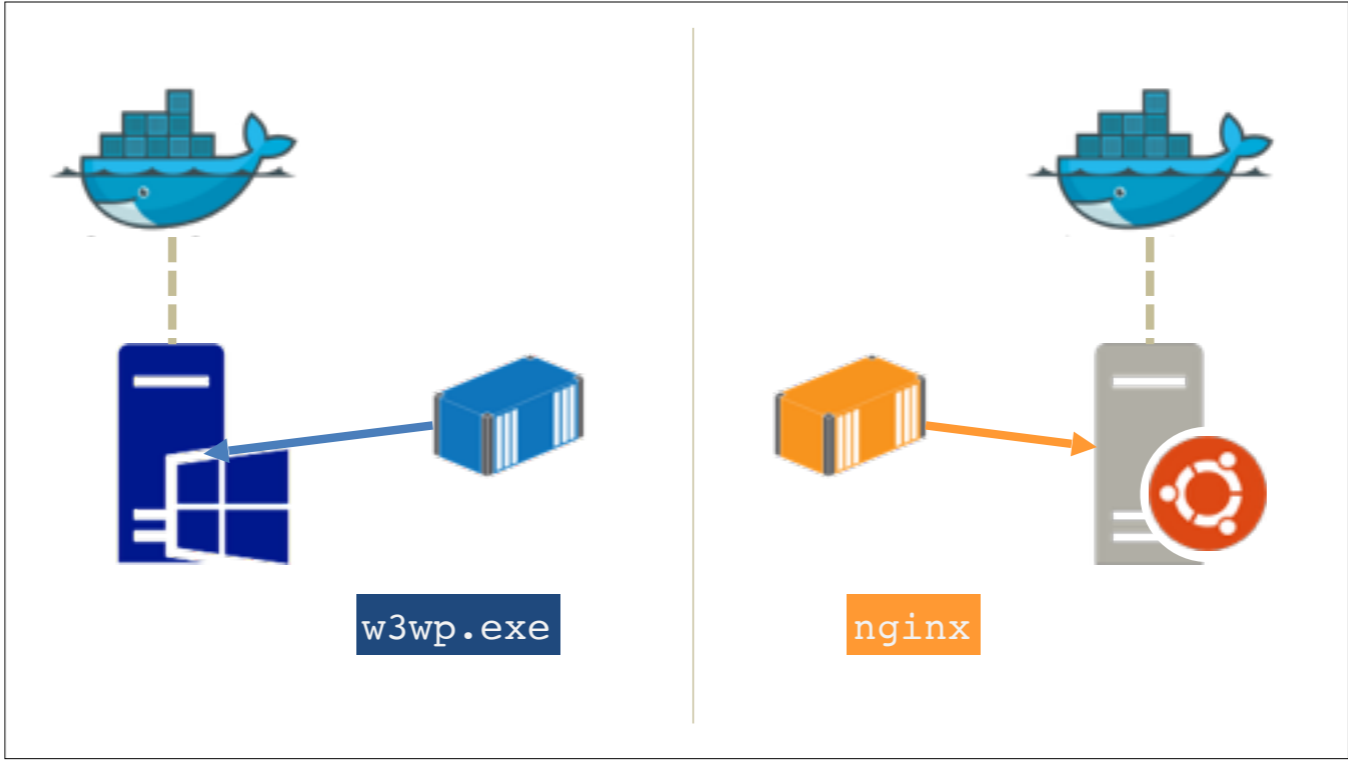

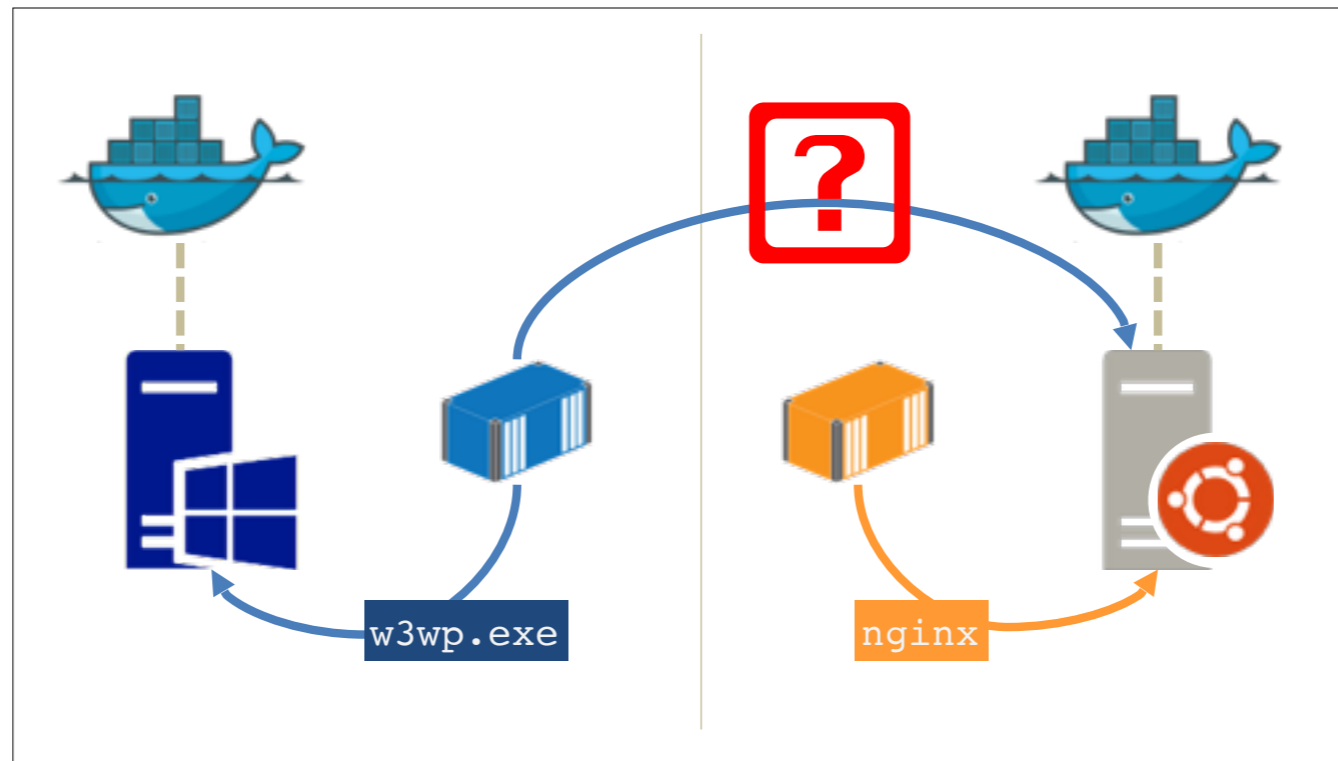

```
> docker run
```

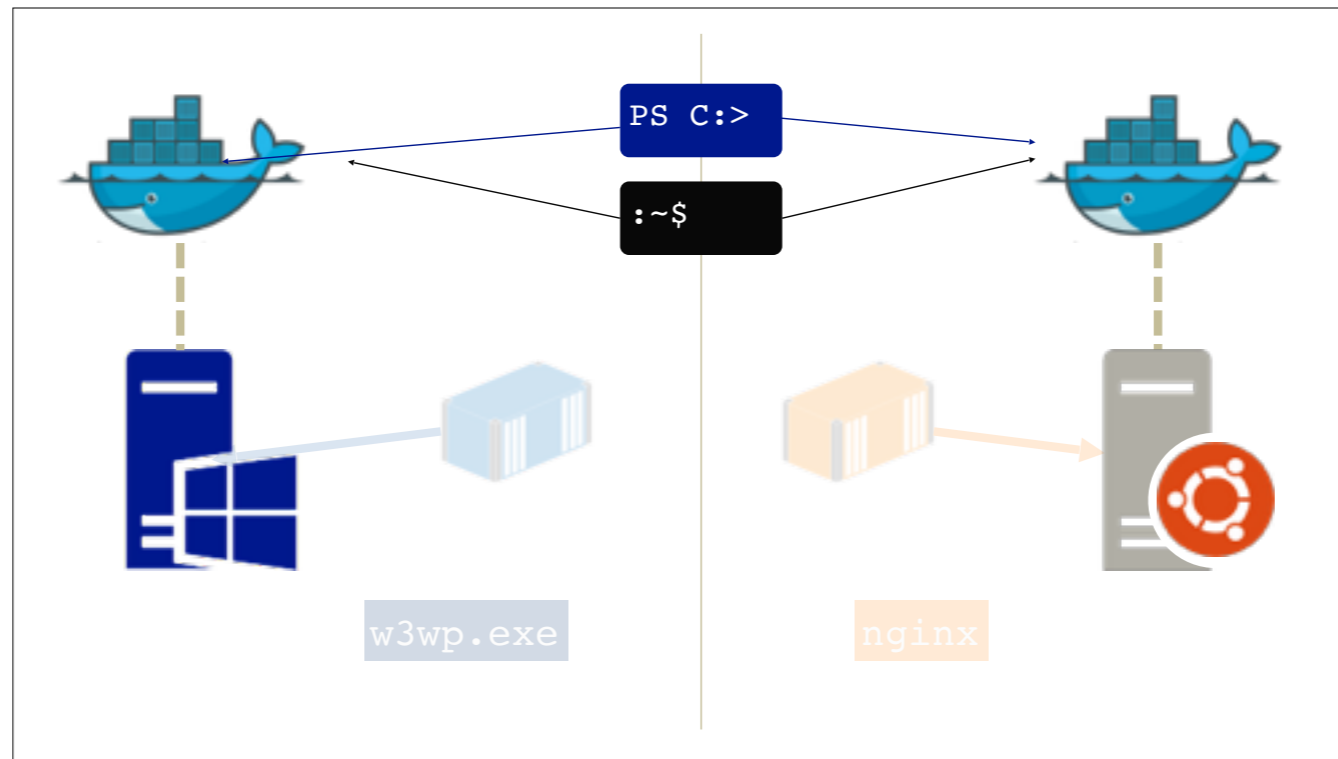

Dude, what about Linux?

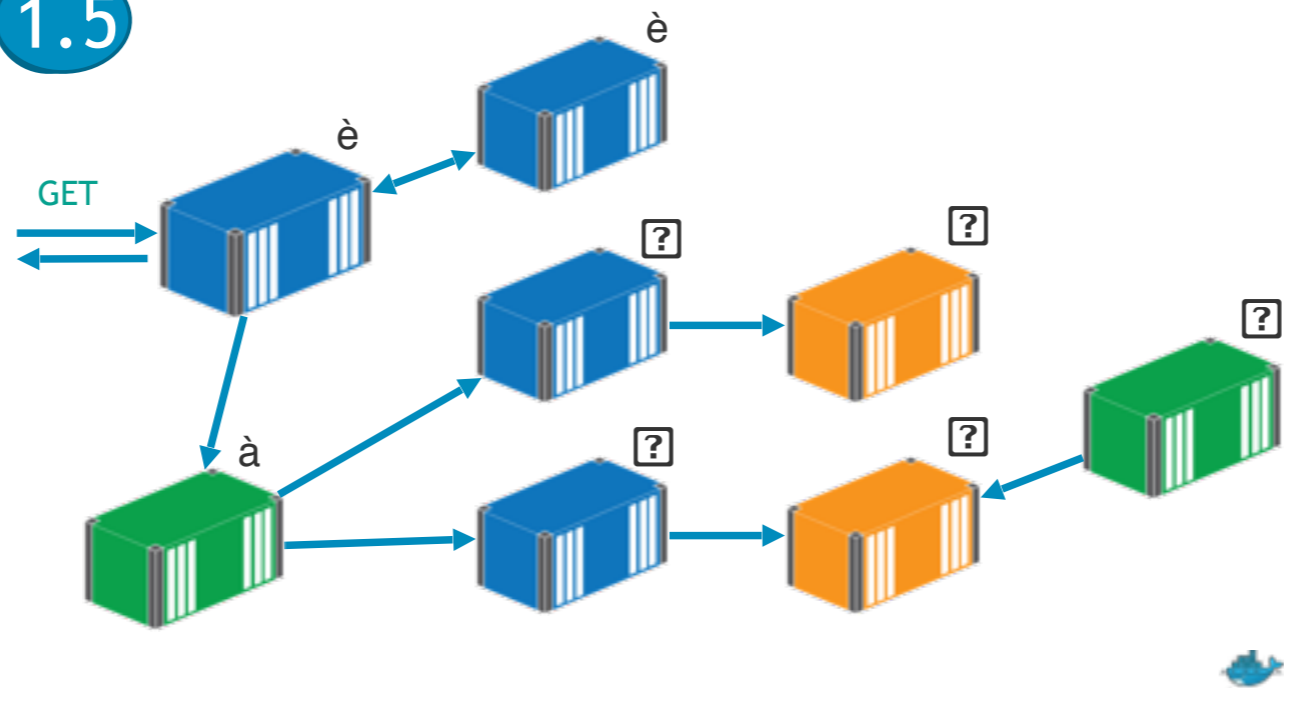

The Demo App

1.0

1.5

Part 1: Docker on Windows

Show the app running across two VMs
Highlight different management interfaces
Talk around deployment and upgrade options

Part 2: Modernizing the platform

Show the app running across two VMs
Highlight different management interfaces
Talk around deployment and upgrade options

Part 3: Modernizing the architecture

Show the app running across two VMs
Highlight different management interfaces
Talk around deployment and upgrade options

Thank you!

Try the Hands-On Labs for swarm mode!
